<i>List of figures</i>	<i>xxiii</i>
<i>List of examples</i>	<i>xxxi</i>
<i>Biography</i>	<i>xxxvii</i>
<i>Preface</i>	<i>xxxix</i>
<i>Acknowledgments</i>	<i>xli</i>
1. Introduction	1
1.1. Overview of the book	1
1.2. Types of spacecraft	3
1.3. Courses based on this book	8
1.3.1. A one-semester course	8
1.3.2. A half-semester course	8
1.3.3. An eight-lecture course	9
References	9
2. History	11
2.1. Space story	11
2.2. Introduction	11
2.3. Pre-1950 – dreaming of space	11
2.4. 1950s – getting started	12
2.5. 1960s – the Golden Age: Apollo to the moon	12
2.6. 1970s – the Space Shuttle era	14
2.7. 1980s – internationalization	16
2.8. 1990s – Hubble	16
2.9. 2000s – commercial space is reborn	19
2.10. 2010s – the space station and beyond	19
2.11. The future	20
References	22
3. Single-axis control	23
3.1. Space story	23
3.2. Introduction	23
3.3. Dynamical systems	23
3.4. Control system	24
3.5. Kalman filter	25
3.6. Simulation	26

3.7.	Adding a mode	28
------	---------------	----

PART 1 ADCS theory

4.	ACS system design	33
4.1.	Introduction	33
4.2.	Design flow	33
4.3.	Organization of ACS design teams	35
4.4.	Requirements analysis	35
4.4.1.	Direct requirements	35
4.4.2.	Indirect (or derived) requirements	37
4.4.3.	Control-system requirements	38
4.5.	Satellite design	38
4.5.1.	Selecting a satellite configuration	38
4.5.2.	Selecting a control strategy	40
4.5.3.	Selecting actuators	40
4.5.4.	Thrusters	40
4.5.5.	Wheels	41
4.5.6.	Pivoted wheels and control-moment gyros	41
4.5.7.	Selecting sensors	41
4.5.8.	Selecting processors	43
4.5.9.	Selecting delta-V engines	43
4.5.10.	Selecting the station-keeping engines	44
4.5.11.	Selecting the interfaces	44
4.5.12.	Cost	44
5.	Kinematics	47
5.1.	Space story	47
5.2.	Introduction	47
5.3.	Euler angles	48
5.4.	Transformation matrices	49
5.5.	Quaternions	51
5.5.1.	Introduction	51
5.5.2.	Fundamental properties of the quaternion	52
5.5.3.	Quaternion nomenclature	53
5.5.4.	Quaternion operations	54
5.5.5.	Quaternion transformations	54
5.5.6.	Quaternion derivative	55
5.5.7.	Small angles	57
5.5.8.	Physical interpretation of the quaternion	58
5.5.9.	Incremental quaternion for maneuvers	59
5.5.10.	Angle and unit vector to a quaternion	61
5.5.11.	Axis-alignment quaternion	61

5.5.12.	Small angles	61
5.5.13.	Quaternion interpolation	62
6.	Attitude dynamics	65
6.1.	Space story	65
6.2.	Introduction	65
6.3.	Inertia matrix	66
6.3.1.	Definition	66
6.3.2.	Inertia matrix from components	66
6.3.3.	Common inertia matrices	67
6.4.	Rigid body	68
6.5.	Gyrostad	71
6.6.	Dual spin	72
6.7.	Gravity gradient	74
6.8.	Nutation dynamics	78
6.9.	Planar slosh model	82
6.10.	N-body hub with single degree-of-freedom hinges	85
6.11.	N-body hub with wheels	89
6.12.	Control-moment gyros	94
6.13.	Flexible structures	97
	References	101
7.	Environment	103
7.1.	Space story	103
7.2.	Introduction	103
7.3.	Optical environment	103
7.3.1.	Solar radiation	103
7.3.2.	Earth albedo	104
7.3.3.	Earth radiation	105
7.4.	Atmosphere	105
7.5.	Plasma	107
7.6.	Gravity	107
7.6.1.	Point mass	107
7.6.2.	Spherical harmonics	108
7.7.	Magnetic fields	111
7.8.	Ionizing radiation	113
	References	115
8.	Disturbances	117
8.1.	Space story	117
8.2.	Introduction	117

8.3.	External disturbances	119
8.3.1.	Surface geometry	122
8.3.2.	Aerodynamic	122
8.3.3.	Electrodynamic force	127
8.3.4.	Gravity gradient	129
8.3.5.	Residual dipole	131
8.3.6.	Radio-frequency forces	131
8.3.7.	Solar pressure	133
8.3.8.	Earth-albedo force and torque	134
8.3.9.	Planetary-radiation force and torque	136
8.3.10.	Thermal torque	136
8.3.11.	Thruster plumes	137
8.3.12.	Outgassing force	139
8.3.13.	Shadowing	140
8.4.	Internal disturbances	141
8.5.	Fourier-series representation	141
	References	145
9.	Budgets	147
9.1.	Introduction	147
9.2.	Pointing budgets	147
9.3.	Propellant budgets	149
9.4.	Power budgets	150
9.5.	Mass budgets	152
10.	Actuators	153
10.1.	Space story	153
10.2.	Introduction	153
10.3.	Types of actuators	153
10.4.	Reaction-wheel model	155
10.4.1.	Introduction	155
10.4.2.	Momentum exchange	156
10.4.3.	Motor model	157
10.4.4.	Reaction-wheel state equations with current feedback	158
10.4.5.	Tachometer	159
10.4.6.	Friction	160
10.4.7.	Zero crossings	160
10.4.8.	Commutation	161
10.4.9.	Suspensions	161
10.5.	Control-moment gyro	162
10.5.1.	Introduction	162
10.5.2.	Modeling	163
10.5.3.	Torque distribution	164

10.5.4. Single-axis control-moment gyros	165
10.6. Thrusters	166
10.6.1. Introduction	166
10.6.2. Pulsewidth modulation	166
10.6.3. Minimum impulse bit	166
10.6.4. Time constants	167
10.6.5. Fuel system	168
10.7. Magnetic torquers	169
10.7.1. The magnetic field	169
10.7.2. Magnetic torque	169
10.8. Solenoids	172
10.8.1. Introduction	172
10.8.2. Derivation of the equations of motion for a dual-coil solenoid	173
10.8.3. Derivation of the equations of motion for a single-coil solenoid	176
10.9. Stepping motor	179
10.10. Dampers	180
References	180
11. Sensors	181
11.1. Space story	181
11.2. Introduction	181
11.3. Types of sensors	181
11.4. Planetary optical sensors	182
11.4.1. Horizon sensors	182
11.4.2. Earth and planetary sensors	183
11.4.3. Scanning Earth sensor	187
11.4.4. Analog Sun sensors	188
11.4.5. Digital Sun sensors	190
11.5. Gyros	190
11.6. Other sensors	195
11.6.1. Magnetometers	195
11.6.2. Accelerometers	195
11.6.3. Potentiometers	197
11.6.4. Angle encoders	197
11.7. Star cameras	197
11.7.1. Pinhole camera	197
11.7.2. Optical errors	199
11.7.3. Imaging-chip errors	200
11.8. GPS	201
References	201

12. Attitude control	203
12.1. Space story	203
12.2. Introduction	203
12.3. Attitude control phases	205
12.4. Attitude control system	206
12.5. Single-axis control	206
12.6. Three-axis control	210
12.7. Gravity-gradient control	213
12.8. Nutation control	214
12.9. Momentum-bias Earth-pointing control	216
12.10. Mixed control	219
12.11. Magnetic-torquer-only control	221
12.11.1. BDot	221
12.12. Low-bandwidth small-angle control	222
12.13. Lyapunov control	229
12.14. Orbit-transfer maneuver	231
12.15. Docking	234
12.16. Command distribution	238
12.16.1. The optimal torque-distribution problem	238
12.16.2. Reaction wheels	240
12.16.3. Linear programming	241
12.17. Attitude profile design	242
12.17.1. Alignment method	243
12.17.2. Minimizing the separation angle between vectors	243
12.17.3. Computing the target-inertial vector	245
12.18. Actuator sizing	247
12.18.1. Maneuvers	247
12.18.2. Disturbances	248
References	252
13. Momentum control	253
13.1. Space story	253
13.2. Introduction	253
13.3. Momentum growth	253
13.4. Control algorithms	254
13.5. Control-torque generation	255
13.5.1. Thruster control	255
13.5.2. Magnetic control	256
13.5.3. Solar and aerodynamic pressure	263

14. Attitude estimation	271
14.1. Introduction	271
14.2. Star sensor	271
14.3. Planet sensor	272
14.3.1. Acquisition	272
14.3.2. Roll and pitch measurements from a planet sensor	272
14.4. Sun sensor	275
14.5. Magnetometer	277
14.6. GPS	278
14.7. Earth/Sun/magnetic field	280
14.8. Noise filters	281
References	284
15. Recursive attitude estimation	285
15.1. Introduction	285
15.2. Batch methods	285
15.3. Vector measurements	287
15.4. Disturbance estimation	288
15.5. Stellar-attitude determination	290
15.5.1. Introduction	290
15.5.2. Gyro-based attitude determination	290
15.5.3. A single-axis Kalman filter with a gyro	295
15.5.4. Star identification	297
15.6. Kalman filter with roll, pitch, and yaw and a gyro	299
15.7. Kalman filter with a quaternion measurement	300
16. Simulation	305
16.1. Space story	305
16.2. Introduction	305
16.3. Digital simulation	308
16.3.1. Numerical errors	308
16.3.2. Model truncation	309
16.4. Applications of simulation	311
16.4.1. A sequence of simulations for ACS development	311
16.4.2. Analysis support	313
16.4.3. Performance verification	314
16.4.4. Interface verification	319
16.4.5. Operator training	320
16.4.6. Anomaly investigations	321
16.5. Artificial damping	322
References	322

17. Testing	323
17.1. Space story	323
17.2. A testing methodology	323
17.3. Reliability	323
17.3.1. Requirements flow and testing	325
17.3.2. Testing lifecycle for the ACS flight software	326
17.4. Flight-vehicle control-system testing	327
17.5. Test levels (preflight)	328
17.6. Test levels (flight)	330
17.7. Simulations	331
17.8. Software-development standards	332
References	332
18. Spacecraft operations	333
18.1. Space story	333
18.2. Introduction	333
18.3. Preparing for a mission	333
18.4. Elements of flight operations	335
18.5. Mission-operations timeline	336
18.6. Mission-operations entities	336
18.7. Mission-operations preparation	336
18.8. Mission-operations organization	337
18.9. Mission-control center	339
18.10. Mission-operations example	339
PART 2 Design examples	
19. Passive control-system design	345
19.1. Introduction	345
19.2. ISS orbit	345
19.3. Gravity gradient	346
19.4. Simulations	349
20. Spinning-satellite control-system design	351
20.1. Introduction	351
20.2. Spinning-spacecraft operation	351
20.3. Transfer orbit	352
20.4. Spinning transfer orbit	352
20.4.1. Dynamics	352
20.4.2. Actuators and sensors	355

20.4.3. Changing the spin rate	355
20.4.4. Spin-axis reorientation	355
20.4.5. Attitude determination	359
20.4.6. Delta-V engine firing	361
References	361

21. Geosynchronous-satellite control-system design 363

21.1. Space story	363
21.2. Introduction	363
21.3. Requirements	363
21.4. The design process	364
21.5. Mission-orbit design	364
21.6. The geometry	366
21.7. Control-system summary	366
21.8. A mission architecture	367
21.9. Design steps	368
21.10. Spacecraft overview	368
21.11. Disturbances	370
21.12. Acquisition using the dual-spin turn	372
21.12.1. Dynamics	372
21.12.2. Actuators and sensors	372
21.12.3. Initialization	373
21.12.4. Simulation	373
21.12.5. Pitch acquisition	373
21.13. Dynamics	374
21.13.1. Introduction	374
21.13.2. Normal operations	374
21.13.3. Dual-spin stability	376
21.13.4. Station-keeping operations	376
21.13.5. Actuators and sensors	378
21.13.6. Control-system organization	380
21.13.7. Modes	380
21.13.8. Earth sensor	381
21.13.9. Gyros	381
21.13.10. Noise filtering	381
21.13.11. Momentum-wheel pitch and tachometer loops	382
21.13.12. Low-bandwidth roll/yaw control	382
21.13.13. Thruster control	388
21.13.14. High-bandwidth roll/yaw and pitch control	388
21.13.15. Magnetic-torquer control	389
21.13.16. Thruster control	389
21.13.17. Actuator saturation	390
21.13.18. Thruster resolution	390

21.14. Summary	391
References	391

I.3.1. Orbital geometry	603
I.3.2. Cartesian coordinates	605
I.3.3. Keplerian elements	605
I.3.4. Equinoctial elements	607
I.4. Propagating orbits	609
I.4.1. Introduction	609
I.4.2. Kepler propagation	610
I.4.3. Numerical integration	610
I.5. Gravitational acceleration	612
I.5.1. Point masses	612
I.5.2. Planetary asymmetries	612
I.6. Linearized orbit equations	615
 J. Optics	 617
J.1. Optical sensors	617
J.1.1. Optical nomenclature	617
J.1.2. Telescope types	617
J.1.3. Geometry of imaging	619
J.1.4. Telescope performance	623
J.1.5. Pinhole camera	627
J.2. Radiometry	628
J.2.1. Mathematical basis for position and attitude determination using a camera	628
J.2.2. Basic radiometry	629
J.2.3. Radiosity	630
J.2.4. Radiometric sources	631
J.2.5. Noise and performance factors	632
J.2.6. Dynamic range	632
J.2.7. Blooming	632
J.2.8. Quantum efficiency	633
J.2.9. Imaging-chip theory	633
J.2.10. Data reduction	636
